<https://unlost-in-translation.vercel.app/>

Unlost in Translation is a smart, context-aware bilingual conversational translation app. It goes beyond simple word-for-word translation by using AI to adapt your translations to the specific situation and tone you need, making sure you always sound natural and culturally appropriate.

Here is a breakdown of what the app is and what it excels at:

☀ What it is Good At

- 1. Context-Aware Translations (Tone & Situation)** Unlike traditional translators that give you a generic, robotic output, Unlost in Translation lets you select the Tone (e.g., Casual, Formal, Romantic, Polite, Angry) and the Situation (e.g., Ordering Food, Shopping, Airport, Small Talk). This means the AI shapes the translation to perfectly match the social context you are in, helping you avoid awkward cultural missteps.
- 2. Seamless Two-Way Conversations** The app acts as a digital mediator between two people. With its split-screen, chat-like message history, it clearly tracks the back-and-forth conversation, showing who said what. It also has a quick "Reply in [Language]" button to instantly swap the source and target languages to let the other person type their response.
- 3. "Show, Don't Tell" Flashcard Mode** If you don't want to attempt pronouncing the translation, the app has a brilliant full-screen "Flashcard" view. You can expand the translated text to take up the entire screen in large, highly readable text, making it incredibly easy to just show your phone to a taxi driver, waiter, or shopkeeper.
- 4. Visual Translation (Image Input)** You aren't limited to just typing. You can snap a photo or upload an image (like a foreign menu, a street sign, or a document) and the app uses AI vision to extract and translate the text for you.
- 5. Easily Sharable URLs** The app instantly syncs your current translation, languages, tone, and situation to the URL. If you need someone else to see exactly what you are trying to say, you can just copy the link and send it to them. When they open it, the app will instantly pre-fill everything for them!
- 6. Beautiful, Travel-Friendly Interface** The app is designed mobile-first with a beautiful, modern, "glassmorphic" interface. It uses smooth animations, clear language flags, and accessible copy

buttons to make the experience completely stress-free when you are traveling and need to communicate quickly on the go.

In short, it's the perfect digital travel companion for having genuine, contextually accurate conversations with people who don't speak your language!

Unlost in Translation - mobile version

This application is a feature-rich, intelligent translation tool designed to combine the speed of standard translation with the contextual understanding of AI.

At its core, it is a robust language translator that supports text input, historical tracking, saved (starred) translations, and a dual-screen "Conversation Mode" for real-time back-and-forth dialogue.

Its standout features are driven by Gemini AI integrations:

Enhanced Accuracy & Context: You can toggle the "Gemini Translation" engine to process translations with deeper contextual awareness compared to standard literal translation engines.

Cultural Translation Validation: When a translation is produced, the app leverages Gemini to analyze the result for cultural appropriateness, literal mistranslations of idioms, and tone. If the translation could be misinterpreted or sounds unnatural in the target language, the app will display actionable warnings, explanations, and alternative phrasing suggestions.

Advanced Conversation Assistant: The conversation mode is designed to facilitate smooth dialogue between two users, augmented by the translation validation engine to ensure nothing is lost—or awkward—in translation.

It is particularly good for travelers, language learners, and professionals who need to ensure their translations are not just literally correct, but also culturally appropriate and natural-sounding.

<https://weather-voodoo.vercel.app>

source <https://github.com/xoriors/experimental/tree/main/weather-voodoo>

promo <https://github.com/xoriors/experimental/tree/main/weather-voodoo/docs>

Weather Voodoo

A hyperlocal weather planner for outdoor and marine trips — picks the best hours of the next 3 days for whatever you want to do, blending wind, gust, rain, waves, and visibility into a single 0–100 score.

What it's good at

Route-based forecasts (not just point-in-time)

Instead of "what's the weather in Phuket today", you ask "what's the weather along the path from Phi Phi to Krabi at 14:00 tomorrow?" It samples 3 points along the route, fetches forecasts at each, and fuses them into worst-case-per-hour numbers. The route itself is real:

Sea mode → OSM ferry routing → fallback to open-ocean great-circle routing

Land mode → OSM hiking/cycling trails (path, footway, cycleway, etc.) — snaps to real paths in parks/forests, not straight lines through buildings

Waypoints mode → multi-leg trips with mixed segment types

Trip-window scoring

Tell it "I want a 4-hour trip starting between 09:00–17:00, sea mode" and it ranks every possible start time. The window score = the worst hour in the window (chain-as-strong-as-weakest-link), so you don't accidentally pick a window with a great average but a brutal middle hour.

Wind compass for direction of travel

A live compass widget on the map shows wind relative to your heading — color-coded (bright red head wind → bright green tail wind) with a rotating arrow. The hour scrubber lets you peek ahead to plan when the wind turns. Built specifically for cyclists/sailors who care about head-vs-tail wind, not just speed.

GPS follow mode

A "drive mode" button (3 states: off → centered → following) tracks your position with a rotating directional arrow, computing heading from GPS movement. Works on any device with GPS, no compass needed.

Quality-of-life

PWA — installs to home screen, works offline once cached

Shared viewport across tabs (Route / Fixed / Waypoints all remember the same map view)

Locale — English / Thai / Romanian, swappable on the fly

Activity-aware — separate verdicts for swimming, hiking, kayaking, ferry, photography, sightseeing

Hour-level reasoning — every hour shows "Good for / Avoid X" based on conditions

Daylight markers — sunrise/sunset rendered inline so you don't plan a 2-hour photo session ending after dark

Reference scale — calm/breezy/small-craft-warning bands for every metric

Best fit

Cyclists planning rides where wind direction makes or breaks the segment

Sailors / kayakers / ferry passengers in coastal SE Asia (where it was originally tuned)

Hikers who want to know if there's a clear weather window in the next 3 days

Photographers who need golden-hour + low-wind windows

Anyone who's tired of weather apps that show "Bangkok: 32°C" when the question is really "is now a good time to do X"

What it's not

Not a real-time radar app, not for severe-weather emergency planning, not a route planner with turn-by-turn navigation. It's a decision tool for "should I go, and when?"

<https://echoread-527868439551.us-west1.run.app>

This application is an AI-Powered Audio Reader (EchoRead) that transforms various forms of written and visual content into an accessible, highly customizable listening experience.

Here is a breakdown of what the app does and what it excels at:

🎯 Core Purpose

The app is designed for people who prefer to listen to content rather than read it on a screen—whether you're commuting, exercising, checking your "Read Later" backlog, or trying to digest a long report before a meeting.

✨ What It Is Good At

1. Universal Content Ingestion

Instead of being limited to just web articles, the app can process almost any medium:

Web Articles (URLs): Powered by a headless browser (Playwright) backend, it can reliably fetch content from complex, modern webpages (including JavaScript-rendered sites) while ignoring ads, menus, and sidebars.

PDF Documents: You can upload local PDF files or provide a link to a PDF, and the AI will extract and read the contents.

YouTube Videos: It can analyze videos and read back transcripts or comprehensive summaries of the video content.

Direct Text: Perfect for pasting in emails, notes, or essays.

2. Smart Summarization & AI Processing

You don't have to listen to the entire article if you are short on time. The app uses Google's Gemini AI to offer three distinct reading modes:

Full Text: Cleans the content and reads it in its entirety.

Short Summary: Distills the entire URL, video, or PDF down to a single, concise paragraph.

Long Summary: Analyzes the content to generate a structured, in-depth breakdown (Key Topics and Key Takeaways).

3. A Premium Player Experience

The user interface is designed like a high-end podcast or audiobook app:

Real-time Highlighting: The text highlights as the audio plays, so you can seamlessly read along or find your place.

Sleep Timer: Set the audio to automatically pause after 15, 30, or 60 minutes.

Granular Controls: Includes playback speed adjustments, visual seeking/scrubbing, voice selection, and 10-second skip buttons.

4. Content Management

History & Read Later: It automatically tracks what you've listened to so you don't lose your place. You can also explicitly save links, PDFs, or videos to a dedicated "Read Later" list to build up an audio queue.

Exporting: You can easily copy the shareable link of what you're listening to, or download the cleaned-up/summarized text locally as a .txt file.

In short, it is a comprehensive "Text-to-Audio" productivity suite that is exceptionally good at cutting through web clutter, summarizing dense information, and letting you consume multi-format media completely hands-free.

<https://gatherspace-46500086196.europe-west2.run.app>

This app is GatherSpace, a virtual workspace designed for remote teams to connect, collaborate, and co-work in real-time.

Here is a breakdown of what the application is and what it excels at:

☀️ What it is

GatherSpace acts as a spatial virtual office. Users log in and are represented as avatars on a shared 2D canvas. The core mechanic revolves around proximity-based communication—meaning your distance from others in the virtual room determines if you are connected to them, mimicking real-world office interactions.

✨ What it's good at

Spontaneous Proximity Chat:

Audio and video connections are formed dynamically based on how close you are to other users on the canvas (specifically, within a configured "nearby radius"). If you want to talk to a group, you just move your avatar over to them.

Rich Communication Media:

It supports real-time text chat, microphone toggling, video cameras, and even full screen-sharing using WebRTC and Firebase infrastructure.

Presence & Social Awareness:

Users can update their custom text status (e.g., "Deep Work", "Be right back"), see who is actively online, view which virtual room everyone is in, and even send a "Knock/Ping" to get a coworker's attention.

Focused Desktop UI:

The UI provides a clean "Map" view alongside a modular "Sidebar" where users can flip between seeing who is online and chatting with the people nearby. Visual streams (video/screen-sharing) pop up dynamically as draggable video tiles when interacting with teammates.

<https://echolearn-527868439551.us-west1.run.app>

EchoLearn is an AI-powered microlearning application designed to deliver bite-sized lessons on a variety of topics while actively encouraging critical thinking.

Based on its current structure and design, here is an overview of what the app is uniquely good at:

Delivering Bite-Sized Learning: It breaks down complex topics into small, digestible lessons (microlearning) that are easy to consume on the go.

Challenging Biases: Instead of just presenting a single narrative or absolute facts, the app is explicitly designed to present diverse, multi-faceted viewpoints to help users see multiple sides of a topic.

Fostering Critical Thinking: By offering contrasting perspectives, it pushes users to think critically about what they learn rather than accepting information at face value.

AI-Driven Nuance: Under the hood, it utilizes Google's Gemini AI to dynamically generate nuanced content and format these multi-perspective lessons.

In short, EchoLearn isn't just a flashcard or standard trivia app—it's an educational tool built to broaden perspectives and teach you how to think about a subject, not just what to think.

<https://geolens-ai-photo-tourism-527868439551.europe-west2.run.app>

GeoLens AI is an AI-powered travel companion designed to turn your photos into interactive, educational experiences. By taking or uploading a picture of a landmark, the app analyzes the image, identifies the location, and overlays rich historical information directly onto the photo.

Here is what the application is particularly good at:

Instant Landmark Identification: It uses advanced vision AI to quickly recognize monuments, buildings, and famous sites from a single uploaded user photograph.

Real-Time Historical Context: Rather than relying on static databases, it utilizes Google Search grounding to fetch the most accurate, up-to-date historical facts and narratives about the identified landmark.

Immersive Audio Narration: It goes beyond just displaying text by generating on-demand audio narrations. This makes it a great hands-free tour guide, allowing you to listen to a landmark's history while actually looking at it in the real world.

AR-Style Experience: The app wraps its capabilities in a sleek, dark-themed visual interface with scanning animations and glass-panel overlays, creating a futuristic, augmented-reality feel.

<https://maramures-news-aggregator-527868439551.europe-west2.run.app>

This application, Maramureş.News, is a modern, high-performance news aggregator specifically focused on local press and updates for the Maramureş region of Romania.

Here is a breakdown of what the application does and its main strengths:

What it does:

It pulls localized news content (likely powered or parsed via the Google Gemini API, based on the codebase) and presents it in a clean, easily readable feed. Users can browse the latest articles, filter them by specific categories, and seamlessly switch between light and dark viewing modes.

What it is particularly good at:

Fast, Offline-First Architecture: It uses IndexedDB to securely store your news feed locally on your device. This means the app loads instantly on return visits and can even display cached news when you don't have an active internet connection.

Auto-Syncing: The app quietly checks for and fetches fresh news in the background (every 30 minutes), merging new articles with your local database without disrupting your reading experience.

Smart Categorization: The news articles are automatically categorized, allowing you to easily filter the feed using the scrollable category bar at the top (e.g., viewing only sports, politics, or local events).

Modern & Accessible Design: It features a highly polished, responsive interface built with Tailwind CSS. It focuses on readability with spacious typography and includes a seamless Dark Mode toggle for comfortable reading at night.

<https://muse-studio-527868439551.us-west1.run.app>

This application is Muse Studio (Christmas Edition), a full-featured, AI-powered creative suite designed specifically for content creators, vloggers, and digital artists. Its primary focus is generating, editing, and animating high-quality visual content using Google's latest generative AI models (Gemini and Veo).

Here is a breakdown of what the application does and what it excels at:

1. High-End Video Generation (Powered by Veo 3.1)

The app is excellent at generating cinematic, fast-paced videos.

YouTube Shorts & Reels Maker: It has dedicated tools to create vertical (9:16) short-form content optimized for platforms like TikTok, Instagram Reels, and YouTube Shorts based on templates (e.g., "Trending Vlog" style).

Multi-Image "Viral Reels": It can take multiple reference images and fuse them into a cohesive video, mimicking different stylistic tones (cinematic, vlog, dreamy, action).

Extended Video Lengths: It can generate short, medium, or long sequence videos by programmatically "extending" the generated Veo video story.

2. Image Generation & Animation

The app is built to handle complete image workflows from scratch to final animation.

Text-to-Image: Generates high-resolution images (up to 4K in various aspect ratios) using the gemini-3-pro-image-preview model.

Image-to-Video Animation: It can take a static image (uploaded or previously generated) and bring it to life using Veo's image-to-video capabilities.

"Magic" Editing: Users can upload an image and provide text instructions (e.g., "change the background to a snowy mountain") to precisely edit it using gemini-2.5-flash-image.

3. Creative Brainstorming Assistant

It features a built-in "Muse" assistant tab powered by the gemini-3-pro-preview model with deep reasoning capabilities (configured with a high "thinking budget"). It is good at helping creators brainstorm vlog ideas, write generation prompts, or refine their creative direction.

4. Festive Aesthetic

Visually, the app is styled as a "Christmas Edition." It features an immersive dark pine green background, frosted glass panels, cardinal red and gold accents, and a continuous falling snow animation in the background to set a festive holiday mood.

Overall, it's a powerful all-in-one sandbox for creators who want to experiment with the absolute cutting edge of Google's image and video generation AI, wrapped in a polished, festive interface.

<https://muse-studio-elite-creator-edition-527868439551.us-west1.run.app>

Muse Studio: Elite Creator Edition is a high-end, AI-powered professional content creation suite. Built to leverage Google's advanced generative models (like Gemini for reasoning/images and the Veo model family for high-fidelity video), it serves as an all-in-one cinematic workshop for creators.

Here is a breakdown of what the application does and what it excels at:

What It Is

It is a web-based "studio" interface designed to feel like a premium creative software suite.

Users can upload images, write descriptive prompts, and use sophisticated AI tools to generate, animate, edit, and stitch immersive media content directly in the browser.

What It Is Exceptionally Good At

Generating Viral Video Sequences (Shorts/Reels):

With the Viral Creator and Cinema Stitcher tools, the app is optimized for creating compelling short-form video content. You can upload static frames and have the app stitch them together using advanced cinematic transitions (like Dynamic Zoom, Glitch Pulse, or VHS Glitch) paired with specific musical "vibes" (e.g., Viral Pop, Cinematic Orchestral, or Cyberpunk Synth).

High-Quality Image-to-Video Animation:

The suite utilizes Veo video generation models to take simple text prompts or uploaded reference images and breathe cinematic movement into them (e.g., turning a single photo into a dynamic video with specific camera movements or atmospheric tones).

Thematic & Holiday Content:

The app has a pronounced focus on festive, seasonal, and aesthetic creation. Tools like Gift Generator and Merry Animations allow creators to instantly visualize luxury gift concepts or produce high-end holiday animations.

Quick Iterative Editing (Holiday Lab):

It serves as a rapid editing laboratory where you can upload standard images and ask the AI to "polish the pixels," retouch elements, or completely shift the lighting to make it look professional and cinematic.

Who Is This For?

It is perfect for social media managers, digital artists, marketers, or anyone looking to rapidly prototype high-fidelity video aesthetics (like TikToks or Instagram Reels) without needing complex desktop software like Premiere Pro or After Effects.

<https://ai-quote-video-generator-527868439551.us-west1.run.app>

This application is an AI Quote Video Generator, a powerful multimodal tool that combines generative AI image, video, voice, and reasoning capabilities into a single React application. Here is a breakdown of what the application does and what it excels at:

1. AI Quote Video Generation (The "Generator" Tab)

This is a full-stack media synthesis pipeline that brings characters to life using Google's generative models.

What it does: You can describe a character (e.g., "A wise old man in a forest") or upload your own photo. The app then uses the Gemini image model (gemini-2.5-flash-image) to generate the character. It creates a completely original motivational quote using gemini-2.5-flash-lite and generates an inspirational voice reading the quote using text-to-speech (gemini-2.5-flash-preview-tts). Finally, it stitches the voice, image, and quote together into an animated lifelike video using the Veo video generation model.

What it's good at:

Delivering a seamless end-to-end multimedia creation experience without requiring video editing skills.

Combining multiple AI steps (Text rules → TTS → Image generation → Video synthesis) efficiently in the background.

2. Deep Reasoning (The "Thinking Mode" Tab)

This tab acts as an advanced query terminal powered by gemini-2.5-pro.

What it does: It provides a text interface for your most complex questions and problems.

What it's good at:

Complex Problem Solving: It is configured with a high "Thinking Budget" constraint using the Pro model, which means it excels at deep, multi-step logical reasoning tasks. You can use it for tough coding problems, strategic business queries, or exploring highly nuanced topics where the AI needs to take its time to map out a thorough answer.

Summary

In short, the application is excellent at multimodal AI workflows. It serves as both a creative media studio for easily generating engaging, dynamic quote videos, and a powerful problem-solving assistant for deep thought and analysis!

<https://chromamotion-527868439551.us-west1.run.app>

ChromaMotion is an AI-powered photo enhancement application designed to revitalize old, faded, or black-and-white photos by turning them into vibrant, living memories.

Here is what the app is currently built to do:

What it is good at:

AI Image Colorization: It uses Google's generative AI to automatically add realistic, high-quality color to black-and-white or old-style photographs.

Image-to-Video Generation: It can bring static photos to life by animating them into videos (likely utilizing AI video models like Veo) to create dynamic motion from a single uploaded image.

Smart Animations (Fallbacks): Even if the AI video generation gets blocked by safety filters, the app has a built-in client-side "Ken Burns" effect generator that smartly pans and zooms the image to create a video locally in the browser.

Photo Management: You can upload multiple files at once, preview them, easily rotate them (to fix misaligned scans or portrait/landscape issues), and view the final images or generated videos in fullscreen.

In short, it's a modern tool for restoring and animating historical or nostalgic photos using cutting-edge AI!
